

Mini Iron II Item No. 9101

What is it? - Few tools transcend the entire spectrum of sewing and crafting like the iron does. It seems there are always some materials that need to be pressed or shaped. The iron itself has been around in one form or another for a few hundred years. The problem is that it has been a few hundred years mostly unmarred by progress. Not much has changed except that we now heat them with electricity instead of a wood burning stove and we've made them a little lighter with the use of modern metallic compounds. But little has been done to keep step with an almost explosive growth in sewing and craft techniques and applications. Unfortunately it is our nature to "make do". But what if there was an alternative, something that worked better? The old adage "the right tool for the right job" comes to mind. To more completely meet the evolving needs of our creative quest Clover has done just that and produced the Mini Iron II, the right tool for the right job. Designed with designers in mind the Mini Iron is actually several ironing tools in one. The basic unit is the heating/power element contained in a comfortable, light-weight handle. Five separate interchangeable tips are available to meet any ironing or shaping needs that may be required to achieve our creative goals. It's the ironing tool for all reasons.

What does it do? - Clover's Mini Iron II is an extremely versatile sewing and crafting tool. The breadth of its applications is limited only by the requirements of the task. Actually we're still finding uses for this valuable tool. Some you might consider are:

- The chevron shaped tip is ideal for fine seams and is especially adept at narrow hems, tight corners, points and any place with limited access. A larger chevron shape is supplied for those applications with a little more surface area or access.

- Fine hems, small diameter tubes and fabric folding can be effectively pressed with the slim line tip.
- Ironing decorative ribbon or appliqué in place is a snap. The maneuverability of the iron and the size of the tip allows you to easily see and precisely place your embellishments. You no longer have to be satisfied with any unsatisfactory results or start over and "re-do".
- There is a knife tip for slicing and sealing many craft materials. The ball tip is a natural for shaping curves in fabric or other craft materials. Think flower petals.

How do I promote it? - Clover's Mini Iron II is one of those tools that sells itself. Utilize it in your classes or make a story board with the different applications demonstrated and everyone will want one. What other tool can you use to iron seams, hems, corners, tips, tubes, pleats, doll clothes, apply appliqué, fold fabric and shape crafted items? "Mini" only refers to the size of the iron. "Maxi" would more aptly refer to its creative value to the efforts of the modern sewist or crafter. Do yourself a favor and make one part of your studio, you deserve it.

Steve Butler has expertise in the sewing and needlecraft industry. Co-founder of Superior Threads. Steve has taught numerous classes at all major sewing machine conventions, regional trade shows, International Quilt Market, various machine embroidery venues and has been a four time repeat guest on Martha Pullen's popular PBS series, "Martha's Sewing Room".
